Linux.md

```
carlosjcatotavalladares@cis106vm:~$ cat linux.md

# What is Linux?
Linux is an open-source operating system modeled on UNIX. It is a leading operating system on servers and other big iron systems such as mainframe computers and supercomputers.
#3 Reasons to use Linux:
-**Open Source Nature:** One of the primary reasons to use Linux is its open-source nature. This means that its source code is freely available and can be modified and distributed by anyone.
-**Security:** Linux is generally considered more secure than many other operating systems.
-**Customization and Variety:** There is a wide variety of Linux distributions tailored for different types of users and systems.
```

```
carlosjcatotavalladares@cis106vm:~$ cat linux+other.md

# What is Linux?
Linux is an open-source operating system modeled on UNIX. It is a leading operating system on servers and other big iron systems such as mainframe computers and supercomputers.
#3 Reasons to use Linux:
-**Open Source Nature:** One of the primary reasons to use Linux is its open-source nature. This means that its source code is freely available and can be modified and distributed by anyone.
-**Security:** Linux is generally considered more secure than many other operating systems.
-**Customization and Variety:** There is a wide variety of Linux distributions tailored for different types of users and systems.
# Other operating systems
* **Microsoft Windows** is a group of several proprietary graphical operating system families, all of which are developed and marketed by Microsoft.
* **macOS** is a series of proprietary graphical operating systems developed and marketed by Apple Inc.
* **FreeBSD** is a free and open-source Unix-like operating system descended from the Berkeley Software Distribution (BSD), which was based on Research Unix.
* **RISC OS** is a computer operating system originally designed by Acorn Computers Ltd in Cambridge, England.
